                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 11

147159

19 gamma 2a chain constant region - pig (fragment)

C;Species: Sus scrofa domestica (domestic pig)

C;Date: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_change 21-Jan-2000

C;Accession: 147159

R;Kacskovics, 1.; Suu, J.; Butler, J.E.

A;Title: Five putative subclasses of swine IgG identified from the cDNA sequences of A;Reference number: 147158; MUID:95015845; PMID:7930579
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       147162

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 28, 7

Patent No. 6136310

GENERAL INFORMATION:
APPLICANT: Hanna, Nabil
APPLICANT: Reff, Mitchell E.
TITLE OF INVENTION: Recombinant Anti-CD4 Antibodies for Human
TITLE OF INVENTION: Therapy
NUMBER OF SEQUENCES: 59
CORRESPONDENCE ADDRESS:
ADDRESSEE: BURNS, DOANE, SWECKER & MATHIS
STREET: 699 Prince Street
CONTY: ALEXANDARIA
                                                                                                                                                                                                                                          61 PREEQFNSTYRVVSVLTVLHQDWLNGKEYKCKVSNKGLPSSIEKTISKAK 110

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

WPI; 1993-196742/24. N-PSDB; AAQ43848 Antibody conjugates specific for transferrin receptor - used for diagnosis and treatment of cancer, AIDS and neurological disorders.

Disclosure, Fig 19J; 151pp; English.

The sequences given in AAR41715-18 are encoded by the expression vector pAH4808. This vector represents the cloning of the human gamma isotype, gamma-4, with the variable region of the murine monoclonal antibody 128.1. This plasmid encodes a chimeric monoclonal antibody in which the heavy chain (VH) is derived from a murine source and the sequences encoding (FHL, CH2 and CH3 are derived from a human source. This vector, in combination with the chimeric light chain vector, pAG4611 (see also AAQ43845), was transfected into SP2/0 cells and clones were isolated.

```
ö
128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked to a neuropharmaceutical or diagnostic agent. The conjugate may be used to treat or prevent enerological disorders eg. brain tumours, AIDS, stroke, epilepsy, Parkinsons and Alzheimers disease. It may also be used for diagnostic methods. The antibody can be engineered to contain a human Fc region. By transferring the binding specificity into a human framework, the immunogenicity is reduced without affecting the immunosuppressive activity. (Updated on 25-MAR-2003 to correct PN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New humanised OKT3 antibody with mutated Fc receptor binding region -useful as immunosuppressant to reduce transplant rejection, lacks the T-cell activating side effects of wild type antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The anti-human CD3 mouse monoclonal antibody OKT3 (IgG2a) has potent T-

```
This sequence represents the mutated CH2 molecule Gideltaac, and is a binding molecule of the invention. The recombinant binding molecule is capable of binding a target molecule without triggering complement capable of binding domain capable of binding a target molecule; and comprises: (a) a binding domain capable of binding a target molecule; and comprises: (b) an effector domain that is homologous to all or part of a constant companin of a human immunoglobulin G (IgG) heavy chain. The binding constant companing inhibition of B cell activation, mast cell degranulation or phagocytosis). The binding molecule can be used to prevent or inhibit the binding molecule can be used to prevent or inhibit the binding molecule can be used to prevent or inhibit the binding molecule is useful for the treatment of graft-vs-chost disease, organ transplant rejection, bone-marrow transplant rejection, autoimmune thrombocytopaenia and arthritis), alloimmune thrombocytopaenia and arthritis), alloimmunity (e.g. vascullitis, autoimmunity (e.g. crohn's, HDN cartell/neonatal alloimmune thrombocytopaenia, asthma and allergy), chronic or acute inflammatory diseases (e.g. Crohn's, HDN cartery occlusion). The binding molecules do not activate complement or trigger cytotoxic activities through FcgammaR and desirable IgG properties have been retained. The polypeptides do not contain non-

ö
human amino acids, and are therefore likely to have reduced immunogenicity. Further, they still bind Protein A, which is consistent with being able to cross the human placenta through interaction with FCRn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the mutated CH2 molecule Gldeltaab, and is a binding molecule of the invention. The recombinant binding molecule is capable of binding a target molecule without triggering complement dependent lysis, or the cell-mediated destruction of the target comprises: (a) a binding domain capable of binding a target molecule; and (b) an effector domain that is homologous to all or part of a constant domain of a human immunoglobulin G (196) heavy chain. The binding molecule is used to bind a target molecule (especially FcgammaRIIb causing inhibition of B call activation, mast cell degrammaRIID phagocytosis). The binding molecule can be used to prevent or inhibit the binding of a second binding molecule, e.g. an antibody, to the target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Binding molecule; CH2 sequence; complement dependent lysis; FcgammaRIIb; cell-mediated destruction; human; immunoglobulin G; IgG heavy chain; B cell activation; mast cell degranulation; phagocytosis; vasculitis; Crohn's disease; graft-va-host disease; organ transplant rejection; alloimemune disease; asthma; alloimemune disorder; autoimmune disease; asthma; allergy; autoimmune thrombocytopaenia; arthritis; erythroblastosis foetalis; neonatal alloimmune thrombocytopaenia; doodpastures disease; therapy;

molecule. The binding molecule is useful for the treatment of graft-vs-host disease, organ transplant rejection, bone-marrow transplant rejection, autoimmunity (e.g. vascullitis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia and arthritis), alloimmunity (e.g. or fortal/neonatal alloimmune thrombocytopaenia, asthma and allergy), chronic or acute inflammatory diseases (e.g. Crohn's, HDN (erythroblastosis foetalis), Goodpastures, sickle cell anaemia and coronary artery occlusion). The binding molecules do not activate complement or trigger cytotoxic activities through FcgammaR and desirable IgG properties have been retained. The polypeptides do not contain non-human amino acids, and are therefore likely to have reduced immunogenicity. Further, they still bind Protein A, which is consistent with being able to cross the human placenta through interaction with FCRn
                                                                                                                                                                                                                                                                                                                                                                                                   9

heavy chain (VH) is derived from a murine source and the sequences encoding CH1, CH2 and CH13 are derived from a human source. This vector, in combination with the chimeric light chain vector, pAG4611 (see also AAQ4845), was transfected into SP2/0 cells and clones were isolated.

128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked to a neuropharmaceutical neurological disorders egg. brain tumours, AIDS, stroke, epilepsy, Parkinsons and Alzheimers disease. It may also be used for diagnostic methods. (Updated on 25-MAR-2003 to correct PN field.)

Immunoglobulic-derived binding molecules that do not activate complement or trigger cytotoxic activities and maintaining desirable immunoglobulin properties.

Claim 12; Fig 17; 81pp; English.

Humanised antibodies having modified allotypic determinant - useful for matching allotypes in therapy with decreased likelihood of causing undesirable immune responses.

Disclosure; Fig 4c; 57pp; English.

This sequence represents the mutated CH2 molecule G2deltaa, and is a binding molecule of the invention. The recombinant binding molecule is capable of binding a target molecule without triggering complement

```
dependent lysis, or the cell-mediated destruction of the target comprises: (a) a binding domain capable of binding a target molecule; and (b) an effector domain that is homologous to all or part of a constant cannot be a human immunoglobulin G (IgG) heavy chain. The binding causing inhibition of B cell activation, mast cell degranulation or pagocytosis). The binding molecule can be used to prevent or inhibit the binding inhibition of B cell activation, mast cell degranulation or causing inhibition of B cell activation, bused to prevent or inhibit the binding molecule can be used to prevent or inhibit the binding molecule is useful for the treatment of graft-vs-condition, autoimmune transplant rejection, bone-marrow transplant concertion, autoimmune thrombocytopaenia and arthritis, alloimmunity (e.g. vasculitis, autoimmune hambocytopaenia and arthritis), alloimmunity (e.g. catoingunity collusion). The binding molecules on the catoin correct inflammatory diseases (e.g. Crohn's, HDN chronatal alloimmune thrombocytopaenia and arthritis conversed on the transplant correct inflammatory diseases (e.g. Crohn's, HDN correct activate complement or trigger cytotoxic activities through FcgammaR and desirable corronary artery occlusion). The binding molecules do not contain nonhuman amino acids, and are therefore likely to have reduced immunogenicity. Further, they still bind Protein A, which is consistent conversed to the polypeptide of the corrors the human placenta through interaction with FCRn corrors the human placenta through interaction with FCRn corrors to the human placenta through interaction with FCRn corrors to the human placenta through interaction with FCRn corrors the mannon acids through placenta through interaction with FCRn corrors to the human placenta through interaction with FCRn corrors the human placenta through interaction with FCRn corrors the human placenta through interaction with FCRn corrors are the transparent corrections the human placenta through interaction the polyperice corrors the human p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 APPVA-GPSVFLFPPKPFDTLMISRTPEVTCVVVDVSHEDPEVQFNWYVDGVEVHNAKTK 59

This vector contains open reading frames encoding the heavy chain variable region (VH) of the antibody 128.1, an amplicial nesistance gene and a histidine (histidinol) selection marker.

Transcription of the VH gene is from the VH promoter of the murine 27.44 gene. The vector also includes a heavy chain immunoglobulin enhancer and the human gammal constant region (CH). The VH region of 128.1 was isolated by polymerase chain reaction and cloned into plasmid pAH4274.

This was achieved by digesting the plasmid and the product with EcoRV and Nhel. The VH gene was inserted in-frame with the human gammal CH region CH at the 3' end of the VH-J region by means of a Nhel site. 128.1 is an anti-human transferrin receptor antibody which binds to the transferrin
In humans, IgG1 may exist as either of two allotypes at site 1, 2 or 17. The inventor's propose eliminating these allotypes by amino acid changes to agree with the sequences of IgG2, IgG3 and IgG4. None of the allotype sites (1, 2 and 17) are located within the CH2 domain. New "isoallotypes" should be suitable for therapeutic use in all patients. See AAR27678-R27681. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a new composition comprises a variant of a parent polypeptide having at least a portion of a PC region. The variant mediates antibody-dependent cell-mediated cytotoxicity (ADCC) in the presence of effector cells more effectively than the parent polypeptide and comprises at least one amino acid modification at position 280 in the er region. The composition is useful in treating diseases e.g., autoimmune diseases. The present sequence represents the amino acid sequence of a human immunoglobulin G, IgG, CH region.
                                                                                                                                                                                                                       9

receptor on brain capillary endothelial cells. This antibody may be use in a conjugate in which it is linked to a neuro- pharmaceutical or diagnostic agent. The conjugate may be used to treat or prevent neurological disorders eg. brain tumours, AIDS, stroke, epilepsy, Parkinsons and Alzheimers disease. It may also be used for diagnostic methods. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                     1 APPVAGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSQEDPEVQFNWYVDGVEVHNAKTK

Compositions, methods and uses. The invention may be useful for the development of compounds with an osteopathic.

Cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen, gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic, immunomodulator, antialleragic, muscular-Gen, cytostatic, nephrotropic or antinflammatory, neuroleptic, ophthalmological, nephrotropic or respiratory-Gen activity acting as a tumour necrosis factor (TNF)-

cmodulator or cytokine-agonist. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression cardiovascular, dental or roral, dermatological, ear, nose or throat, cardiovascular, dental or roral, dermatological, ear, nose or throat, cendocrine, metabolic, gastrointestinal, gynaecological, hepatic,

```
where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from cysteine residues and a muteted human IgG1 immunoglobulin hinge region polypeptide contains no more than one cysteine residues and a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains no cysteine residues. The binding domain-immunoglobulin fusion protein is capable of at least one immunoglobulin hinge region polypeptide contains no cysteine residues. The binding domain-immunoglobulin fusion protein, a recombinant expression construct path and a remain polypeptide is capable of specifically binding to an antigen. Also included are an isolated polynucleotide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct, producing the binding domain-immunoglobulin fusion protein, a plarmaceutical composition comprising the binding domain-immunoglobulin fusion protein is useful for treating a parapected of having a malignant condition or a B-cell disorder. Chaving or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein sequence is a binding domain-immunoglobulin fusion protein sequence is a binding domain-immunoglobulin fusion protein sequence is a binding domain-immunoglobulin fusion protein sequence is a binding domain manusing aravis, Grave's disease. The present sequence is a binding domain and saviable in electronic format directly from USPTO and and is also available in electronic format directly from USPTO and and is also available in electronic format directly from USPTO and and is also available in electronic format directly electronic format or therefore none of the sequences and be explicitly by any par
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2 PPVAGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSQEDPEVQFNWYVDGVEVHNAKTKP 61

The invention relates to a modified immunoglobulin (IgG1) which comprises
                                                                                                                                                                                                   an IgG constant domain having at least one amino acid modification. The immunoglobulins are used in the treatment or prevention of a disease or disorder by passive immunotherapy for vaccinating a subject and for in vivo diagnosis of a subject. The disease and disorders include a gamma globulinaemia, hypogammaglobulinaemia, autoimmune diseases, graft-versustact, hypogammaglobulinaemia, autoimmune diseases, graft-versustreatment of various systemic infections. The present sequence is human immunoglobulin GI (IgG1) Fc region second constant (CH2) domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 APELLGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKFNWYVDGVEVHNAKTK 60

                        parent polypeptide having at least a portion of a Fc region. The variant mediates antibody-dependent cell-mediated cytotoxicity (ADCC) in the presence of effector cells more effectively than the parent polypeptide and comprises at least one amino acid modification at position 280 in the Fc region. The composition is useful in treating diseases e.g., autoimmune diseases. The present sequence represents a CH2 region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  having

                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a new composition comprises a variant of a parent polypeptide having at least a portion of a Fc region. The variant mediates antibody dependent cell-mediated cytotoxicity (ADCC) in the presence of effector cells more effectively than the parent polypeptide and comprises at least one amino acid modification at position 280 in the Fc region. The composition is useful in treating diseases e.g.,

```

The present invention relates to a method for generating an immune response to an antigen in a patient. The method comprises administering to the patient an immunoglobulin (Ig) or its portion where the Ig has at least one peptide epitope of the antigen attached to the Ig or its portion and administering the immunoglobulin or its portion in conjunction with a RNA segment. A recombinant human Ig molecule capable of binding to an RC gamma receptor (FogammaR) of an antigen presenting cell (APC) was used to illustrate the invention. The recombinant human Ig molecule comprises a CH3 region (ADL90102), a CH2 region (ADL90103), a hinge region (ADL90104) and a flanking peptide (ADL90105).

Sequence 110 AA;

Disclosure; Page 11; 154pp; English.

New composition comprising a variant of a parent polypeptide having at least a portion of a Fe region, useful in treating e.g., autoimmune

Affitle: Chemical modification of the carboxyl groups of protein substrates enhances thei Afreference number: S05572; MUID:88005152; PMID:3115831
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A Map position: 2p12-2p12

C;Complex: an immunoglobulin heterotetramer subunit consists of two identical light (kapp

hain disulfide bonds; in some cases, such as IgA and IgM, the subunits associate into lan

C;Superfamily: immunoglobulin C region; immunoglobulin homology

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A,Molecule type: protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Indels Ig kappa-1 chain C region b95 allotype - rabbit (fragment)
C;Species: Oryctolagus cuniculus (domestic rabbit)
C;Species: O2-May-1994 #sequence_revision 18-Nov-1994 #text_change 21-Jan-2000
C;Accession: F53275
R;Ayadi, H.; Marche, P.N.; Cazenave, P.A.
Immunogenetics 34, 201-207, 1991 immunoglobulin kappa chain genes.
A;Ritle: Evolution of the rabbit immunoglobulin kappa chain genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Proc. Natl. Acad. Sci. U.S.A. 68:590-594(1971).
-!- MISCELLANEOUS: The MOPC 315 cell line produces 2 light chains, 1
normal lambda-2 chain and 1 abnormal lambda-1 chain that is
missing a large part of the V region. The C region sequence (shown
                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE FROM N.A. Chen K.C.S., Kindt T.J., Krause R.M.;
Primary structure of the Lohain from a rabbit homogeneous antibody
to streptococcal carbohydrate. II. Sequence determination of peptides
from tryptic and peptic digests.";
J. Biol. Chem. 250:3289-3296(1975).
I- MISCELLANEOUS: This chain was obtained from antibody to the
specific carbohydrate of group C Streptococci and was isolated
from the serum of a single rabbit.
-I. SIMILARITY: Contains I immunoglobulin-like domain.

                                                                                                                                                                                                                                         -I. MISCELLANEOUS: The sequence shown is the Kern-/Oz-/Mcg- chain found in proteins SH, X, and NIG-64. The Kern protein has the Kern+ marker, the NEWM protein has the Oz+ marker, the Mcg protein has the Kern+ marker, and the Mcg+ marker.

-I. MISCELLANEOUS: Six tandem lambda-type genes were identified and the 3 most 5, were sequenced. These correspond to the Mcg sequence (lambda-1), the Kern-/Oz- sequence (lambda-2) and the Kern-/Oz+ sequence (lambda-2) and the Kern-/Oz+

"A genomic gene encoding the b5 rabbit immunoglobulin kappa constant
region: implications for latent alloxype phenomenon.";
Proc. Natl. Acad. Sci. U.S.A. 81:1789-1793 (1984).

-!- MISCELLANEOUS: The cDNA from which this sequence was derived
contains a terminator codon within the V-region coding region. The
origin of this codon and of the differences between this and other
sequenced b5 C regions are unclear. The cDNA clone was made using
mRNA from trypanosome infected b5-homozygous rabbits.
-!- SIMILARITY: Contains 1 immunoglobulin-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8 PSVFLEPPKPKDTLMISRTPEVTCVVVDVSQEDPEVQFNWYVDGVEVH-NAKTKPREEQF

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 4, Application US/08557050
Patent No. 6491916
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Bluestone, Jeffrey A.
APPLICANT: Zivin, Robert A.
APPLICANT: Joiliffe, Linda K.
TITLE OF INVENTION: METHODS AND MATERIALS FOR MODULATION OF
                                                                                                                                                                                                                                                                                                                                           GENERAL INCORMATION:
APPLICANT: Zivin, Robert A.
APPLICANT: Zivin, Robert A.
APPLICANT: Jolliffe, Linda K.
APPLICANT: Bluescone, Jeffrey A.
TITLE OF INVENTION: Methods and Materials For Modulation
TITLE OF INVENTION: Of the Immuno-suppressive Activity and
TITLE OF INVENTION: Toxicity of Monoclonal Antibodies
NUMBER OF SEQUENCES: 18

Sequence 36, Application US/09281760E

Sequence 36, Application US/09281760E

Patent No. 6734287

GENERAL INFORMATION:

APPLICANT: Lawton, Robert

APPLICANT: Mermer, Brion

TITLE OF INVENTION: Specific Binding Protein for Treating

TITLE OF INVENTION: Canine Allergy

FILE OF INVENTION: Canine Allergy

FILE REPERENCE: 01-1275A

CURRENT APPLICATION NUMBER: US/09/281,760E

CURRENT FILING DATE: 1999-04-09

NUMBER OF SEQ ID NOS: 39

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 36

LENGTH: 107
                                                                                                                                                                                                                                                            CURRENT APPLICATION DATA:

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/569,147

FILING DATE: 25-March-1996

CLASSIFICATION: 536

ATTONNEY/AGENT INFORMATION:

NAME: Trujilo, Doreen Yarko

REGISTRATION NUMBER: 35,719

REFERENCE/DOCKET NUMBER: 35,719

REFERENCE/DOCKET NUMBER: 35,719

TELECOMMUNICATION: TROCRATION:

TELECOMMUNICATION: 100: 85:

TELEFAX: (215) 568-3100

INFORMATION POR SEQ ID NO: 85:

SEQUENCE CHARACTERISTICS:

LENGTH: 66 amino acids

TYPE: amino acid

TOPOLOGY: linear

MOLECULE TYPE: protein

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
